Building a Brand

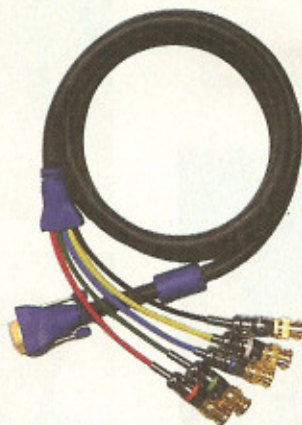

Why branding is a matter of keeping your
company's promises—page 122

Staying on Schedule

How to create a realistic schedule that works
for you and your clients—page 106

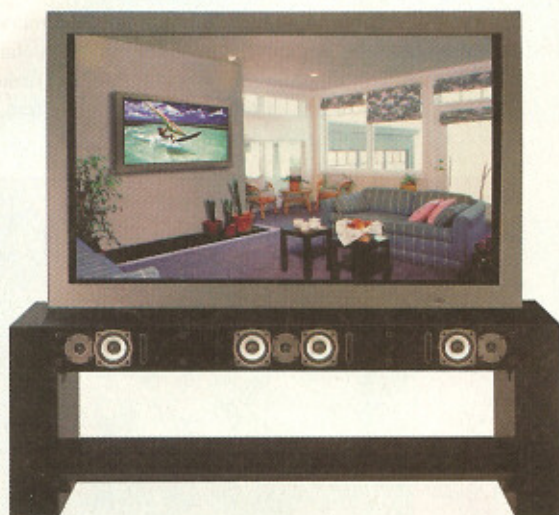

Canton. The *Karat M 90 DC* three-way floor speaker has displacement-control technology that filters subsonic signals to prevent undesirable woofer excursions at very low frequencies, delivering more accurate bass, the maker says. The speaker also features a side-firing 10-inch woofer and a front baffle width of less than 7 inches. 612.706.9250. www.cantonusa.com. **Circle 119.**

Accell. The *HD15/VGA to 5 BNC* cable features five individual coaxial cables bundled together. All connectors and contacts are 24-karat gold-plated to maximize conductivity, and a ferrite core on the HD15 cable end reduces electromagnetic interference. 510.438.9288. www.accellcables.com. **Circle 120.**

Nippura. Highest of the high tech, *Blue Ocean rear projection screens* promise sharp high-definition viewing and frameless, edge-to-edge projection. The screens are finely cast at an extreme thickness tolerance in high-grade acrylic monomer between two clear, optical cell-cast acrylic plates. Standard screen sizes are 72, 84, and 100 inches. 704.370.7720. www.usnippura.com. **Circle 118.**

Onkyo. Compatible with LCD or plasma displays, the *CB-SP1200 video display stand* has integrated left, right, and center channel speakers. The 17-by-47-inch stand is 17 inches deep and shines with a hand-rubbed black lacquer finish. Each speaker is magnetically shielded to prevent interference with video displays and has a frequency response of 50 Hz to 100 kHz. 800.229.1687. www.onkyo-usa.com. **Circle 121.**
